

Ecoflow Applications for Farms and Agriculture

The maintenance-free Agricultural Ecoflow Water Conditioner installed in-line on your water delivery system from a Well or Municipal Water Supply will deliver conditioned water to any part of your farm or agricultural facility.

Please Note:

- The Ecoflow is neither a “water softener” nor a “water filter”.
- The Ecoflow breaks down various Chloride particles which consists of; Calcium, Magnesium, Boron & Sodium.
- It requires NO electricity, chemicals or maintenance.
- With all Agricultural Systems, Pre-Filtration will be required prior to the installed position of the Ecoflow.
- Any addition of chemicals may affect the use of the Ecoflow.

Applications of the Ecoflow Water Conditioner:

- Prevents and eliminates hard water scale and corrosion on all water related equipment from Pivot Systems to drip lines, emitters, sprinkler heads, irrigation pumps and water lines.
- Improves percolation and eliminates standing water in your fields by breaking up compacted soil layers.
- Soil profiles are improved. Water use is reduced as much as 20% or more and reduced pumping costs.
- Reduced Fuel or Electrical costs by reducing water usage.
- Improve pump efficiency by providing “wetter” water through piping system.
- Pushes chloride loads deeper into the soil layers in soils with high chloride concentrations allowing plants to thrive in a more suitable environment.
- Increases fine root growth which improves the plants intake of water and nutrients, providing healthier plants.
- Reduces heat stress on plants.
- Plants and seeds germinate sooner and more completely.
- The need for gypsum and acid is reduced or eliminated.
- With better nutrient intake the need for fertilizers are reduced.
- Dissolves impurities within the soil with each irrigation.
- Hard water spotting and overall maintenance to walls, walkways, fences, farm equipment or any other surface that comes into water contact, is reduced (Iron staining may require specialized filtration).
- Helps control and reduce algae growth in water retention areas i.e. lagoons or water tanks.
- Increase savings in labor, equipment replacement and repair costs.

- Through continual testing and research we are discovering new applications for the Ecoflow Water Conditioner.

Ecoflow Water Conditioners are manufactured in the United States and are a one-time purchase with no moving parts to wear out or replace. They use no electricity, no chemicals and require no maintenance. Each unit comes with a 5 year Limited Warranty, for defects in material and craftsmanship under normal use for which it was intended.

Standard Industrial sizes are 2" through 16" 304 Stainless Steel Construction (70 GPM to 4250 GPM).

Special sizes are available upon request.
